

Field Activities Plan (FAP)

PI/Supervisor's Name:	Colleen Cassady St. Clair
Faculty/Department:	Biological Sciences
Department Contact Name and Contact Number:	Colleen Cassady St. Clair 780-492-9685
Project Description (brief):	Identify, implement and refine a protocol for community-based use of aversive conditioning to increase the wariness of urban coyotes. Volunteers will chase coyotes in residential areas and similar human-use areas, throw weighted tennis balls, shout, and use other similar techniques.
Dates of Research Work:	2022-01-01 to 2022-05-31

The Field Activities Plan is an all-encompassing template that contains a hazard assessment, the foundation for an effective safety plan. A hazard assessment is required **before** any field research activity and should be reviewed whenever there is a change in activities, location or people that will affect the hazards and controls. **The requirement of a hazard assessment and the Emergency Response Plan is LAW**

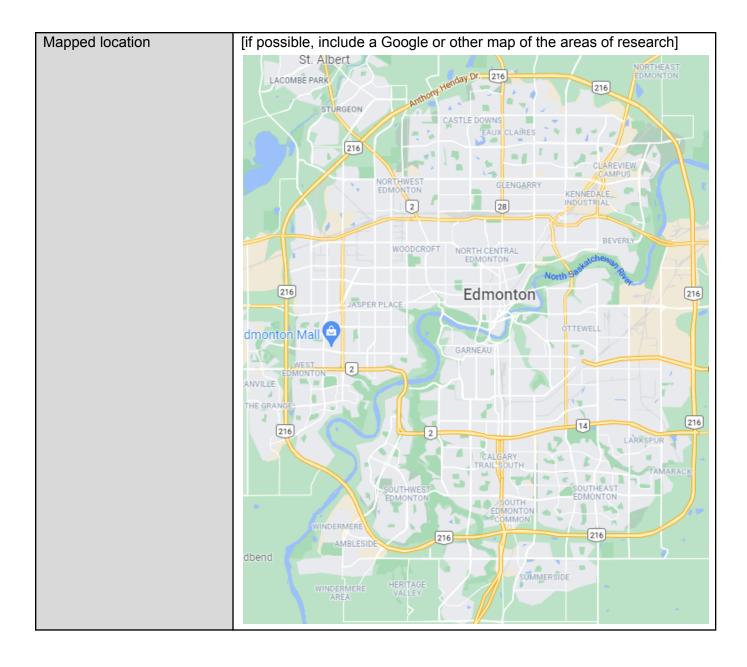

and set out in Part 2 of the *Alberta Occupational Health and Safety Code (AB Reg. 87/2009)*. Also, without doing a proper hazard assessment and failing to access risk of the field project, adhering to travel warnings, etc. can negatively affect insurance coverage.

MAKE A COPY of this template and SAVE it in your drive. It is required that researchers make this template on their own.

Please go to the FRO Pre-Planning web page and follow the steps outlined

1. Project Details

Date Prepared	2021-10-22
Prepared by	Gabrielle Lajeunesse
Department	Biological Sciences
Principal Investigator (PI)	Colleen Cassady St. Clair
Supervisor of Project (if not PI)	
Project Description (synopsis of field research activities)	Identify, implement, and refine a protocol for community-based use of aversive conditioning to increase the wariness of urban coyotes. Volunteers will chase coyotes in residential areas and similar human-use areas and throw weighted tennis balls wrapped in flagging, while shouting or shaking a can full of coins. Volunteers will also carry a stick or umbrella for the unlikely event that coyotes approach. This technique resembles those that are widely recommended by wildlife managers, but coordinates its use in communities as a research project for the M.Sc. of Gabrielle Lajeunesse. Volunteer training will take place via a website. We will assess whether volunteers are qualified for the program via a quiz. Volunteers will have to obtain 100% on the quiz in order to qualify as a volunteer for the program. Volunteer hours will be recorded through patrol forms, and compiled in a spreadsheet. Volunteers will not pursue coyotes in defined contexts that could cause injury to coyotes (e.g., near traffic) or people (e.g., if coyotes respond aggressively). If volunteers perceive danger to people, they are to recede and report to the City of Edmonton Rangers via 311.
Supervisor's Contact Info	Work Ph# 780-492-9685 Alternative Ph# 587-987-5082 Email: cstclair@ualberta.ca
Date of Departure	2022-01-01
Date of Return	2022-05-31
Location of Research (specific –GPS locations, etc.)	53° 33' 0.50" N, -113° 28' 7.36" W Field personnel, including volunteer citizens, will work in neighbourhoods with frequent reports of coyotes. Additional communities may be involved based on the responses of neighbourhoods following recommendations by the City of Edmonton personnel and requests by groups of citizens. Invitations to communities requesting participation and at least 2 volunteers (per community) will be made in December 2021. Last year, a total of 28 different communities participated in the project, and we are expecting a similar number of participating communities this year.
Nearest city/town (EMS)	Edmonton, Canada (0km)

NGO/Affiliated Organizations			

3. Hazard Assessment, Control and Safety Inspections

a. Hazard Assessment and Control

It is preferred to utilize <u>EHS's Hazard Assessment Web Application</u> to prepare the general hazard assessment and control piece. You must make it specific to your situation. After you complete the HAWapp hazard assessment, you can embed it here or attach to the FAP. Go here to see a sample eCompliance field hazard assessment.

OR:

Alternatively, you can prepare a table similar to the format below. Make sure you make it your own but check out this spreadsheet containing examples of field hazards and controls (EHS Control library).

Please REMOVE examples in the table below and make it your own dependent upon your specific research project.

Task	Hazards	Control (mitigation)
Daily fieldwork activities	Weather hazards/ cold related injuries/ heat related injuries	Weather forecasts will be evaluated daily before and during the field operations to prevent exposure to dangerous conditions, such as extreme cold or winds that could cause tree branches to break. Cold related injuries: Field workers will be encouraged to monitor one another for evidence of hypothermia when the temperature drops below 12°C. We will provide advice to wear multiple layers of clothing, including a hat and protection for vulnerable areas (fingers, toes, cheeks, ears, nose). We will encourage adequate hydration, breaks as needed, and use of sunglasses in bright conditions. Heat related injuries: Field workers will be encouraged to monitor one another for

Page 5, Field Activities Plan Template, Version date: May 2021

		evidence of heat stress when the air temperature is above 26°C. We will provide advice to wear lighter clothing, sunscreen, and hats to minimize sunlight. We will encourage adequate hydration, breaks as needed, and use of sunglasses in bright conditions. If the weather becomes too extreme (temperate, precipitation, wind), field workers should terminate the tasks.
Daily fieldwork activities	Insects and allergens	We anticipate no dangers from insects during the period of this field work. Field workers will be asked about individual allergies, asked to inform other team members of allergens (e.g., peanuts), and requested to take necessary precautions (e.g., carrying an Epipen).
Daily fieldwork activities	Aggressive wildlife or dangerous animals	Team members will be encouraged to work in pairs. To minimize the risks in case of encounters with coyotes, the team will stay together, watch for approaching animals, and be prepared to treat bold animals aggressively by throwing balls, shouting, and waving a stick or umbrella fitted with fladry (flagging that is intimidating to wildlife). Volunteers will be asked not to conduct aversive conditioning with pets or children. If pets are present, they must be leashed. Team members will pick up small dogs if a coyote approaches. We will provide training in these techniques and encourage situational awareness.
Daily fieldwork activities	Exposure to COVID-19	a. As per the University of Alberta's vaccination directive, all employees, including field researchers, must present proof that they are "campus ready" (proof of vaccination or proof of exemption). Field workers will also be provided a health daily checklist which will allow them to self-monitor for possible COVID-19 symptoms b. If any team member develops any COVID-19, influenza, or common cold symptoms, they must self-isolate immediately for the required 10 days or

		cessation of symptoms, whichever is longer. c. Field workers will practice physical-distancing from team members, the public, and all other people encountered while working. Researchers will remain at least 2m apart on site and wear masks if they must work within 2m of one another. d. All lab vehicles are stocked with the following supplies: alcohol-based hand sanitizer, surface cleaner (e.g. sanitizing wipes, or disinfectant spray and paper towel), and single-use gloves. University personnel will be provided with cloth masks; volunteers will be asked to provide their own masks. No use of university vehicles will be necessary by volunteers. e. Field workers will wash their hands frequently with soap for at least 20 seconds and/or they will use alcohol-based hand sanitizer before touching equipment, vehicles, keys, etc. All workers must wash their hands after returning from field work.
Daily	Falls - slips or trips	f. When handling shared equipment, gloves must be worn or hands must be sanitized before and after equipment use. Equipment must also be sanitized after each use. Team members will be encouraged to
fieldwork activities		wear supportive footwear, as well as ice walkers (i.e., miniature crampons), if necessary. Team members will maintain a good situational awareness of potential hazards for slips, trips, and falls.
Daily fieldwork activities	Conditions related to transportation	Volunteers are expected to work on foot. We do not require or encourage volunteers to use their vehicles as part of this program. If vehicle transportation is chosen by volunteers, it will be in their own vehicles. University project personnel are certified to drive university vehicles and will adhere to all recommended and required practices to support safe driving and COVID precautions. Driving speeds will be adjusted for weather and safe following distances will be maintained.

Page 7, Field Activities Plan Template, Version date: May 2021

Daily fieldwork activities	Aggressive people	Encounters with aggressive people are unlikely, but possible. These could include residents who oppose the disturbance of wildlife. Volunteers will be trained to calmly inform people about the purpose of the project, provide sources of additional information, and withdraw from the situation if the conflict is not resolved. The field workers will report these events to Colleen St. Clair, and Colleen will report significant near misses or incidents to HSE. If the situation escalates rapidly and the volunteers cannot withdraw to safety, volunteers should contact 911 for assistance.
Daily fieldwork activities	Medical - various	We will encourage volunteers to carry a stick, work within their fitness level, work with a partner if possible (while using all recommended COVID precautions), avoid hazardous conditions (e.g., traffic, ice), carry a cell phone, and ensure they have told others where they are. Because volunteers will be working within their own residential neighbourhoods (excluding river valley and ravine parks) A first aid kit will be carried during all field operations. Emergency contacts are available on the communications systems or on hard copies of this document.

b. Daily Field Safety Meetings

Daily Field Safety Log Books are to keep track of daily field safety meetings. There are instructions in the book. These books should be kept with the department/supervisor for 10 years. Request yours in this <u>online form</u>.

Obtained Log Book and had discussion with team about usage:	Y
---	---

c. Field Worksite Safety Inspection

It is important that the PI or research supervisor attend at the site and do field worksite safety inspections at regular intervals if research is going on for a period of time. Access a copy of an example inspection form on this webpage. It will need to be tailored to the activities you are doing. It may not be possible for a research supervisor to attend, however, an assessment of the field work site can be done by the researcher who is there.

Field Worksite	Date completed:	Inspection Form Attached
Inspector (name)		

Gabrielle		
Lajeunesse and		
Colleen Cassady St.		
Clair will visit many		
of the communities		
that volunteer to		
participate in the		
project, to ensure		
they are well		
informed about local		
conditions. Gabrielle		
and Colleen will help		
volunteers anticipate		
the kinds of		
situations they might		
encounter during		
their patrols and		
describe how to		
maintain safety for		
themselves and		
coyotes. Gabrielle		
and Colleen will also		
provide reminders in		
our weekly updates		
to volunteers. We do		
not anticipate		
inspections per se		
because the field		
sites are too difficult		
to define in		
advance.		
d. Waste (hazardous	s and non-hazardo	us) Disposal
,		, '

Researchers must remove any waste created or brought to the field location. Education is key to the removal of hazardous waste and researchers handling hazardous waste in the field should take the EHS hazardous waste eLearning course.

Will there be hazardous waste at the field site (s)?	Yes □	No ☑	
If there will be hazardous waste, have researchers taken the EHS eLearning course?	Yes □	No □	N/A ☑
What is the plan (provide details) for disposal of hazardous waste?	Yes □	No □	N/A ☑

4. Emergency Response Plan

The Emergency Response Plan is a plan to respond to an emergency situation that could arise from hazards that have been identified in section 3. This section is a top level summary of potential emergencies sustained from the hazards identified. If for security reasons, you do not wish to carry H-FAP in the field, have these emergency contacts on your phone.

a. Emergency Contacts

University Specific Contact Info:	
Department Contact Name (s)	Colleen Cassady St. Clair
Daytime Department Ph#	587-987-5082
After hours Dept. Contact #	587-987-5082
UofA Protective Services	780-492-5050
STARS (Western Canada only):	1-888-888-4567, 1-403-299-0932 or #4567 from a cell phone
Field Specific Emergency Contact In	fo
Cell Phone# of researcher(s)	438-822-5353
Satellite Phone# of researcher (s)	
Local Contact/Host Info and Phone Number	
Skype ID#	
Local Emergency Response Number	911
Local Police Detachment	
Other Contacts	

b. Potential Emergencies and Action Plan

Potential serious emergencies	 Hypothermia and frostbite Aggressive wildlife encounters Personal injuries (e.g., from slips, trips, or falls) Risks related to transportation
In the event of an incident involving a researcher, who will secure the scene and preserve evidence eg. call emergency services when it warrants. Most EMS will secure the scene.	Gabrielle Lajeunesse
Procedures for dealing with potential emergencies	Hypothermia and frostbite. Evidence of hypothermia or frostbite will require personnel to cease field work and return to indoor conditions. Members will seek medical attention right away if required. Aggressive encounters with coyotes will
	be avoided with the tools above and

Page 10, Field Activities Plan Template, Version date: May 2021

	reported to both project leadership and City of Edmonton 311. In the event of a bite injury, personnel will apply first aid or attend an emergency room as needed. Any direct contact between volunteers and coyotes will be reported to city officials.
	Personal injuries from slips and falls will be treated according to first aid principles (e.g., wrapping and rest for a sprain, dressing for a cut), depending on type and seriousness of the injury.
	Vehicle accidents by project personnel will be reported in accordance with University procedures. Volunteers will respond in relation to their own judgement about the nature and severity of injuries.
Identification of location, operational procedures for emergency equipment	University personnel will carry a basic first aid kit in their backpacks and cell phones to maintain communication; volunteers will be encouraged to use the same tools.
Emergency response training requirements	Gabrielle Lajeunesse has first aid training level C
Location and use of emergency facilities	Contact with 911 will be possible. Team members will be able to access the following emergency facilities: - University of Alberta hospital, 8440 112 St NW - Royal Alexandra hospital, 10240 Kingsway NW - Misericordia Community hospital, 16940 87 Ave - Grey Nuns Community hospital, 1100 Youville Drive NW - Northeast Community health centre, 14007 50 St NW
Fire protection requirements	In case of an emergency, the team will evacuate and call 911
Alarm and emergency communication requirements	Team members will keep their cellphones charged and on their person. Edmonton has consistent cell phone coverage for access to 911 service
First aid services required and designated first aiders	Any serious injuries will be reported. Team members will be treated on site, transported to a medical facility, or

Page 11, Field Activities Plan Template, Version date: May 2021

	reported to 911 depending on the severity of the injury
Procedures (rescue and evacuation) and responsible workers	In case of emergency, the team will determine if rescue or evacuation are required. The field sites are located within the city of Edmonton and emergency services are available. In case of field emergencies, standard first aid will be performed, and emergency services will be contacted if needed

c. Emergency Escalation Protocol

Grace period* is: 2 hour(s) (number of hours)

*Grace period is the period of time before the emergency escalation protocol starts – you wait

this long before calling the following:

	When to Call	Who to Call
1.	If after grace period, still no check-in,	Name of researcher: Gabrielle Lajeunesse
	call:	24/7 Contact Ph: 438-822-5353
2.		
	If #1 does not answer, call:	Name of supervisor: Colleen Cassady St. Clair
		24/7 Contact Ph: (587) 987-5082
3.		
	If #1 and #2 do not answer, call:	UAPS: 780-492-5050
		UAPS to contact Department Chair, OEM, HSE
4.		
	If #1, #2, and #3 do not answer, call:	Local RCMP, Ph: 911

5. Communications for Check-in Procedures

7. Training & Immunizations

Copies of training certificates should be kept with the Field Activities Plan (both in field and with the department contact). For immunizations/vaccines, supervisors should explain the benefit of getting these and employees should confirm if they have received this notification.

The <u>EHS Supervisory Professional Development eLearning Course</u> is required for any who direct work, supervise work and/or control a work site. The <u>Working Safely at the UofA eLearning Course</u> is required for any worker (supervisor should take Supervisor PD Course above).

Participant's	Training Received	Notification Immunizations/Vaccinations
Name		required received by participant

FAP	MFzXq_uZ_fs15PfPE/edit#

14. Approval

To be completed by the Principal Investigator involved on the project.

I acknowledge that this safety plan has been prepared in keeping with the requirements of the University of Alberta Off-Campus Activity and Travel Policy and according to my review of Appendix B (Risk Assessment Matrix) and consideration of the research personnel, activities that will be performed and the research site, the risk for this FAP is (CHECK A BOX) low ✓, medium D high or extreme D.. If your risk is extreme, you will need to consult with the Office of Insurance & Risk Assessment or email insurance.risk@ualberta.ca.

Principal Supervisor's Name	Signature:	Date (DD/MM/YYYY)
Colleen Cassady St. Clair	Polleen Jamady A. Slaw	22 October 2021

To be completed by those participating in the research.

By signing below, the following members of the research team have been informed and/or provided with a copy of this Field Activities Plan and any additional procedures/protocols that are attached to form part of the FAP and are aware and in agreement with the hazards identified and the methods used to control or eliminate the hazards.

Researcher's Name:	Signature:	Date (DD/MM/YYYY)
